WASHBASIN

INSTALLING THE WASHBASIN

General

The washbasins sold by DUNE are decorative. The only fixing point required to secure the washbasin to the surface on which it rests is the drain valve.

The drain valve should not be overtightened when installing the washbasin. If it is too tight, it could lead to cracks appearing in the washbasin.

Glass

In the case of glass washbasins, you should not use adhesives or silicone to fix them to the base, as this may lead to the back guard breaking due to the adhesive shrinking, which would affect the finish on the visible side. DUNE will not accept any complaints about stains appearing near to the drainage area if adhesives have been used to fix the washbasin to its base.

Glass washbasins should always be handled on a level surface, and avoid subjecting them to bumps and scratches, as breaking the washbasin's back guard would affect the finish on the visible side. DUNE will not accept any complaints about problems with the finish caused by improper handling of its washbasins.

Stone

The shading of models made from stone may vary as they are manufactured using a natural product composed of veins of varying colours. This should be considered an inherent characteristic of the material which gives each washbasin a unique finish. DUNE will not accept any complaints about shading differences in stone washbasins.

Cement

As they are highly rigid, cement washbasins may crack due to rough handling, bumps or high pressure in the installation of the drain valve. Handle these products with care.

CLEANING THE WASHBASIN

It is recommended to use water, neutral soap and a soft cloth for daily cleaning. To prevent limescale stains, we recommend drying the washbasin after use.

Ceramic

These should be cleaned regularly with suitable cleaning products and rinsed with water. Do not use abrasive products to clean them, to avoid scratching the surface of the washbasin.

Repeatedly pouring away high-temperature liquids leads to stresses in the material, which may result in cracks forming to relieve the stresses. To avoid this phenomenon, DUNE advises against pouring high-temperature liquids into the washbasin or to do so gradually.

Stone

We recommend always using pH neutral cleaning products. Cleaning products with an acidic/basic pH may alter the colouring of the washbasin.

Metal

We recommend using soap and water or pH neutral products for cleaning. Do not use abrasive products to clean them, to avoid scratching the surface of the washbasin. Cleaning products with an acidic/basic pH may alter the colouring of the washbasin.

Cement

Do not pour products with a very high temperature into the washbasin, to prevent cracks from forming. Repeatedly pouring away high-temperature liquids leads to stresses in the material, which may result in cracks forming to relieve

the stresses. To avoid this phenomenon, DUNE advises against pouring high-temperature liquids into the washbasin or to do so gradually.

PVD (gold/silver finish)

We recommend using soap and water or pH neutral products for cleaning. Do not use abrasive products to clean them, to avoid scratching the surface of the washbasin. Cleaning products with an acidic/basic pH may alter the colouring of the washbasin.
